

Whenever adding characters, assuming standard implementation as outlined in the last character patch, unless specified.

Add Mortimer:

- Mortimer's dash is 75% shorter than normal. Mortimer can charge the core up to 2x as long as the normal core charge, with the same linear scale resulting in him being able to throw the core twice as far. (Passive)
- Mortimer can mantle onto objects (with a 30% generous mantle than the old in game mantle). (Movement)
- Activated ability:
 - While carrying the core AND on the ground or the top of an object, Mortimer can press E to emit a blast that knocks nearby enemies away.

Add Lily:

- Lily has an extra dash (2 standard, 3 with core). Lily only has 60 health. (Movement)
- Lily gets a 30% increase to wall jump momentum bonus. (Passive)
- Activated ability: Zip
 - For the next 5 seconds, Lily can fly.
 - Pressing jump makes her go up, equivalent to walking speed, and pressing slide/crouch makes her go down
 - All other movement mechanics apply as usual
 - When Lily has the core, this ability lasts for only 50% of its normal duration. If she activates it and then picks up the core, the remaining duration is halved.
 - 30 second cooldown

Changes:

- If a player ever goes out of bounds of the arena, they should die and respawn.
- When characters die, any abilities or statuses they have active should be wiped. E.g chut should not have his ability active when he is dead. It should stop, and the cooldown timer should start.
 - As mentioned before, cooldown timers should still not reset when players die, and should just continue ticking down.
- Change Oyster's jar to appear at the end of his dash, rather than the beginning.
- Change Oyster's activated ability to have a greater pull radius, and be more consistent to throw.
- Increase X's passive bonus to movement speed while enemies are vulnerable to 15%
- Roxie's rocket should do damage to herself if she shoots it right at her feet, at a wall next to her, etc. if it is close enough to her to deal damage, it should.

Redo the main menu UI with these assets I made. Use the exact font. There is a cursor, back button, different button press states, a slider, a title. If you need a different format let me know. Keep the background black. Replace all elements in the main menu UI with these assets, adjusting the text:
