

Changes:

- Add a healing timer. After 9 seconds without taking damage, characters' health slowly begins to regenerate. Taking damage stops this process immediately.
- Change default keybinds for switching weapons to be: 1 (switch to knife) and 2 (switch to gun)
- Update carrier speed to match the new knife speed
- The game should default to opening the main menu level
- Game mode B: If the core is within the "magnet" zone of two or more players from opposite teams, it should go to the player closest to the core.
- Game mode B: Add a charge up to the throw
 - When a player RELEASES the throw button, the core should instantly be released.
 - The longer the player holds down, the more momentum the core has.
 - Start by making a one second charge up time to reach the current core throw momentum
 - Charge time to throw momentum should be a linear correlation
 - So if the player just clicks the throw button it will throw with very low momentum

Bugs:

- Continue to work on the trace clipping into walls bug
- Sometimes the core is thrown and it turns over before it touches the ground
