

Changes:

*Unless specified, make changes to both game mode a and game mode b

- The air strafing feels incredible, but its too powerful with how much momentum can be gained. I think we need a hard cap on it or an exponential scale in order to make it harder and harder to gain momentum past a certain point.
- Bug identified- when I as a plyer pick up the core, my trace has a gap between me and the end of it (e.g. the most recent section is missing). This bug is not present for bots carrying the trace.
- Sliding still feels pretty bad. Rather than making it a slide you can hold down, have it trigger once, like an ability, with a hidden cooldown to prevent spamming it. Increase the multiplier gained by perfectly timing a jump at the end of a slide.
- For game mode b ONLY, increase the weight of the core, and decrease the size of the goal (reduce height and width)
- Change the gun's firerate to be 150 rounds per minute, or whatever the equivalent is for this framework
- Add upwards recoil, mimicking 100 upwards recoil from destiny 2
- Bug: When jumping on the edge of a raised section, it's glitchy and feels like rubber banding. Add a mantle, to solve this.

And what we really need help with:

Following the instructions under networking doc isn't working to test multiplayer lan. I believe we were able to run a client on one pc and a listen server on another using a vpn, but we still couldn't load into the same actual instance of the game. For this reason, I'm unsure if we were actually on a working network-client setup.
