

Changes:

- Movement:
 - When inputting solely A or D and jumping, when you go the opposite direction during the jump (if pressing A and jumping then letting go of A and pressing D, for example) your momentum doesn't change at all. We want it so doing so slows down your momentum.
 - When mid jump with some forward momentum already, it feels like new movement vectors happen without any player inputs or strafes, which is awkward
 - Sometimes the movement feels like it takes a second to register inputs
 - Fix these, check these, and ensure the overall movement structure remains the same
 - In the commit notes, clearly explain the effects of any changes
- Core throw:
 - Increase the velocity of the core when thrown, along the entire linear charge time. It should go 10% faster
 - Reduce max charge time from .8 to .6 seconds, but keep max velocity the same (plus the above 10%)

New Characters:

- Add them to character select, follow the standard procedure outlined in the last patch which added characters

Roxie

- Roxie can jump 15% higher (Passive)
- Roxie can press V to fire a rocket, which launches her backwards (movement, sort of)
 - The rocket does 100 damage on impact, no matter where it hits
 - The rocket wobbles in the air, making it slightly inaccurate and hard to aim
 - The rocket launches Roxie backwards fast and far (tuning to come after first implementation)
 - 35 second cooldown
- Activated Ability: Modded
 - Roxie loads her gun with a modded clip, turning it full auto and increasing the fire rate by 1.65x
 - This only lasts for one clip of ammo, or 5 seconds (whichever comes first)
 - Cooldown: 25 seconds

Elle

- Right after passing or throwing the trace, Elle automatically cloaks themselves for 3 seconds (passive)

- Cloaking should make them semi-transparent and hard to see or aim at
- Elle gets a 40% increase on well timed slide jump momentum boosts
- Activated ability: Snap
 - Elle creates a portal gate where they stand
 - Elle can reactivate snap within 4 seconds of using it
 - When Elle reactivates snap, they place another portal gate, allowing players to teleport between the two
 - Elle's first gate expires if a second gate isn't place within 4 seconds
 - If a second gate is placed, both gates expire after 8 seconds
 - Cooldown: 35 seconds

Slimeball

- While slimeball is stuck to a wall, he gains 30% fire rate and 30% damage reduction on body shots and front knife stabs
- Slimeball can stick to walls (Hold V) (movement)
- Activated ability: Slimewall
 - Slimeball throws up a wall in the direction he is aiming. It's one player height tall and wide, and it is about the length of a standard in game box (for now, make this changeable)
 - The wall can be shot through, but obstructs vision and moving through it slows enemies by 35%
 - The wall lasts for 4 seconds
 - 25 second cooldown
