

- Remove gun recoil, keep the firing rate
- Opening settings still crashes the entire game
- Make the window for slide jumping .2seconds earlier, and decrease slide duration by .2seconds
 - The window should be right at the end of the slide
- There's a new system for how turnovers work, for game mode goals
 - Instead of automatically going to the other team, a turnover is registered and the core stays on the ground where it landed
 - Players from the opposite team can hold right mouse while hovering over the core to pull it to them, like a magnet.
 - There is a small circle around the core while hovering, which fills with pull progress
 - Pulling the core requires holding down right click while hovering mouse over it (with line of sight) for .3seconds
 - Once the core is pulled, it travels towards the player who completed the pull first at full core thrown velocity
 - Players from the team who dropped the core are locked out of picking it up for 5 seconds
 - After the 5 seconds are up, the opposite team loses the pull ability and either team can pick up the core by running over it
 - When a turnover happens (team in possession drops the core), the beam of light coming from the core should change colors to the opposite team and be larger for the 5 seconds
 - Turnover criteria remain the same (e.g. when a team in possession drops the core on the ground or a flat surface)
- Change the name in the UI so goals is just goals not game mode B,
- Remove the default bind of right clicking to throw the core while carrying it
 - Make the default key bind for parrying right click mouse
- Use Erbaum Bold for in game hud and character ability descriptions
-
