

- Change the white outline to 1px and make sure it hugs the buttons, right now it looks terrible. If you can't do just say it and I'll make new assets
- The core turnover sound should play globally when the core is dropped by a team or a carrier is killed (a turnover), NOT when a team picks up a core which was locked out.
- Currently, when I click to rebind a key in settings, it's not working
 - the issue is that you have to press the button twice for it to register, change it to only once
 - Allow multiple abilities to be bound to the same button if they cannot happen at the same state; e.g. it will not let me bind throw core to the same button as fire but I should be able to do so
 - Change default parry binding to be both Q and thumb mouse button
 - Allow for up to two keybinds per ability/action in settings
- Oyster's E is not resetting when he poisons someone
- Change consecutive chain ceiling slide boosts to 3, change well timed bonus scale to 1.5
- The bots just stand on top of a locked out core, fix that behavior
- A player can hold a core at full throw charge indefinitely.
 - make a second little red ring which fills on the inside of the green one on a .6seconds timer.
 - This timer should start right when throw charge reaches full
 - When the second timer completes, the core is released at full charge automatically, if a player doesn't throw it before then
- Set the spawns back behind the goals

- Structure the ends of the field kind of like a hockey field, where you can play behind the goals.
- Keep the goals the same, raised in the air floating, just move the wall further back and put the spawn area there
- Allow goals to be scored through either side of the goal
- You can slightly lengthen the map for this

Weapons changes:

- Add a full auto smg which does 33 to the head, 18 to the body, 12 to the leg
- Make the fire rate 600rpm, and give the gun 40 ammo
- The reload time for the smg should be .8seconds
- Allow players to swap between the pistol and smg with the current weapon pullout time
- Knives are being changed so that you can dual wield them with a gun
 - Gun in one hand, knife in the other
 - Melee should be bound to right click by default
 - If and only if a player is looking at a pullable core, and being shown the circle icon to pull, this keybind should override the melee keybind.
 - Meleeing should lock the player out of shooting for the length of the animation
 - But you no longer have to swap between knife and gun, just the different guns

- Make these knife changes easy to revert with one prompt
