

Changes:

- Change the “back” zone for knife damage being 100 from a boundary at 90 degrees to 60 degrees, with the center of the 60 angle being at the center of the model.
- Take the 3d “swipe” line animation of the knife out of the player’s view. Can you make the knife animation a stab instead of a swipe?
- Reduce max speed with the knife from the previous 30% increase to 22% and adjust momentum accordingly.
- Reduce the “magnet” radius for catching in game mode b by 10%
- Remove mantling from the game, keep wall jumping. Make sure there’s no bug when a player hits the top edge of an obstacle.

Bugs:

- The trace is clipping into walls sometimes, when a model runs close to a corner/structure.
- There’s a bug where the knife and gun can be held at the same time
