

- Revert the knife changes (no dual wielding). Reduce the pullout time when swapping to knife by 35%. Keep the pullout time for the guns the same.
 - 1 is pistol, 2 is smg, 3 is knife
- I think the core throw bug I mentioned last patch has to do with the downwards velocity of a player:
 - It seems like when a player is going down the core just drops instead of going forward when thrown.
 - I still want the core to carry the player's velocity but I don't want this drop to happen, it completely feels like a bug
- The footsteps don't seem to be in the game -if they are raise the volume by 5db
- Implement the new core model with its idle animation
 - it is football shaped, but should have normal ball physics (just orienting the football to point with its velocity)
 - It should also stand up on its pointy edge and rotate when on the ground
- Implement the new knife model with its stab animation and inspect animation; bind the F key to inspect
- Implement the new hand model and animations with an idle hold for the guns, core, and knife; reload, stab, shoot, and move on a jump and wall jump (all in zip with instructions)
