

#### Changes:

- Parry invulnerability time from .2s to .175s
- Allow Mouse button 1 and mouse button 2 as keybinds in the settings menu
- Change the stepped wall corners to be curved, not terraced
- The grace period on turnovers doesn't seem to be working. Test it on both modes, fix it if needed. If it IS working, increase to .75seconds
- Ensure that if ANY part of a players model touches the trace while dashing, it counts as a connection (either for a parry or for a kill). This feels wonky right now
- Wall jumping still feels like the player is sticking to the wall for a moment too long. Reduce the momentum boost from wall jumping by 10%
- Don't let players shoot while in a dash animation. As soon as they end the dash, let them shoot again.
- Change half timers to be 8 minutes, from 10 minutes
- Add a melee, which players can swap to from the gun (and vice versa). This melee should look and act like a knife. Players should move 30% faster with a knife, as well as have a higher momentum ceiling. The knife should do 100 damage if hitting a player in the back. It should do 30 damage in the front. It should take .5seconds after a knife swing before a player can knife again. Knife and gun pullout time should be roughly .2seconds.

#### Bugs:

- Sometimes the core randomly flies across a players screen, client-side. As far as I can tell, this tends to happen after a goal, mostly.
